

LuckTogether Bug Bounty Program

Security is one of the key standards that our team is guided by. So today we are announcing the launch of a great Bug-Bounty program with a LUCK prize fund which worth **up to US \$20,000** *!

A team of professionals worked on the creation of our smart contracts and we are confident of their security and safety. However, as they say, “one head is good, but two is better.” We invite all interested participants to try and find possible vulnerabilities in our smart contracts. And we are ready to pay for it!

This program is a bounty program prepared by LuckTogether for developers. During the operation of the project, if you find any security vulnerabilities in the project, or put forward constructive opinions on the development direction of the project, you can get LUCK reward, the highest reward worth US \$20,000.

The security vulnerabilities you find may get a higher bounty, if you can provide high-quality documentation, test code, and repair solutions. LuckTogether’s developers will evaluate the importance of security vulnerabilities and determine the amount of bounty comprehensively.

Scope of activity

The scope of our Bug bounty program is the core code of LuckTogether that has passed the security audit, as well as any comments on official channels (official website, marketing/community construction.).

Rules

We sincerely hope that community members will contribute to the development of LuckTogether. To avoid confusion between legal research and malicious attacks, we hereby propose the following rules:

1. Security vulnerability testing must not violate any laws.
2. Do not maliciously damage user accounts or steal funds.
3. Please mention the security vulnerabilities you discovered as soon as possible.
4. If the security vulnerabilities you find provide accidental access to data, please stop the access immediately and report the vulnerabilities to the LuckTogether team.

Only use official channels to discuss security vulnerabilities with our team:
